March 27, 2019

## AEX Fixes/ Enhancements

### Language Setting for Case Email Notifications Subject for Departments

**Affected Workflow:** Workflows where the Publishers select a language preference and send email notifications for signing documents.

**Enhancement Description:** Case email notifications to department users will now have a Subject line that's dependent on the language preference in the landing page. For example, if the Publisher selects "French" as the preferred language, the subject of the email notification will now be the French version rather than the default.

## MV2 Fixes/ Enhancements

### Rewind Sends One Email For Every Case Instead of Every Transaction

**Affected Workflow:** Any signing package where the Publisher or signer performs a rewind to a previous signing group.

**Enhancement Description:** When performing a Rewind, the system previously sent out an email per transaction, thus it would send out an email for every Transaction in a Case. It is now possible to only send one email out after executing a Rewind instead of one being sent out for each Transaction in a Case.

### Bulk Download Works in Conjunction with Search

**Affected Workflow:** This enhancement will not affect any workflow

**Enhancement Description:** A user can now search across Transactions in MV2 Workspace and bulk download PDFs associated with the Transactions returned by the search result.
