

Release 19.07

April 10, 2019

## AEX New Features

### Single Sign On to Service Provider - Backend

**Affected Workflow:** This feature will not affect any current workflows. Only affects workflows utilizing IDP- Initiated SSO.

**Feature Description:** Added the ability to perform IDP-Initiated SSO from Agreement Express to Service Providers such as Salesforce.

## MV2 Enhancements

### Workgroup Transactions not visible in Search results

**Affected Workflow:** This enhancement can be reviewed by all workflows leveraging the workgroup feature.

**Enhancement Description:** MV2 Workgroup Search was previously not supported. Now, users can search for Transactions within their Workgroups.

### MV2 ID Verification: Configure Expiration By Hour

**Affected Workflow:** This enhancement will not affect any workflows.

**Enhancement Description:** MV2 ID Verification expiration can now be configured by the day or hour.

## eConsent To Be Required Each Time Agreement is Signed

**Affected Workflow:** This enhancement will not affect any workflows.

**Enhancement Description:** The eConsent can now be shown every time a signer needs to sign instead of just the first time.

## Save and Send - Refactoring

**Affected Workflow:** This enhancement will improve signing events for cases containing multiple transactions.

**Enhancement Description:** Improvement of Save & Send functionality which prevents the transaction from moving to the next signer in the event that the user closes the browser prematurely or an internet connectivity issue arises.
